Letter of Volatility

To Whom It May Concern,

Please take this letter as clarification and confirmation of memory volatility information regarding the range of Dinkey Pro and Dinkey FD dongle devices sold by Microcosm Limited.

Dinkey Pro Lite dongles

These USB devices contain 8K non-volatile memory that is read-only and cannot be written to even by protected applications.

Dinkey Pro Plus and Dinkey Pro Net dongles

These USB devices contain 8K non-volatile memory that is only accessible by protected applications calling the Microcosm API. This memory has no file system, and is not accessible to 'standard' programs such as Windows Explorer in the way that USB flash drives are.

Dinkey FD Lite, Dinkey FD Plus and Dinkey FD Net dongles

These USB devices contain a standard flash disk of up to 16GB of non-volatile memory that can be used to copy files from the host interface.

If you would like any further information, please feel free to contact me.

Yours Faithfully,

A handwritten signature in black ink, appearing to read "P. Cheesewright".

Peter Cheesewright
Managing Director, Microcosm Limited
